Mobile App:IT Learning Objectives, Standards & Skills

We take great pride in the fact that Mobile App:IT is not simply a terrific introductory level mobile application development course, but a lot more. We not only focus on programming skills, but also on each discipline related to STEM (science, technology, engineering and math).

Using mobile application development as the teaching vehicle, Mobile App:IT exposes your students to a wide range of concepts and technical skills in six separate areas that will greatly help them succeed in the future.

Mobile App:IT’s learning objectives were designed to align very closely with ISTE’s NETS for Students and 21st Century Skills Technology Core Standards.

Mobile App:IT provides instruction in six critical areas:

1. Technical Skills
   A. Introduction to application development for Android technology
   B. Programming by writing code using Java (object oriented language)
   C. Follow technical and increasingly complex programming instructions in order and detail
   D. Design & program real working education based mobile application projects
   E. Use digital design resources and color theory to draw and animate sprites, objects, platforms, backgrounds and loops
   F. Become familiar with common mobile application technologies and platforms; open files, save files, create and program original material, integrate separate files into a mobile application project, create and edit audio sound effects & music
   G. Technical writing; user instructions, application rules and document development process within a development team

2. Creative, Innovative & Critical Thinking
   A. Learn steps of the engineering design cycle (discover- evaluate, design- evaluate, develop- evaluate, deliver- evaluate) and how it works as a practical problem solving method
   B. Use gained technical skills to improve mobile application projects
   C. Use gained technical skills to create, design & program original applications
   D. Troubleshoot applications to fix bugs and ensure performance
   E. Test fellow classmate’s applications to ensure performance
   F. Perform self-evaluations of projects against the required established directives
   G. Perform evaluations of classmate’s projects against the required established directives
   H. Develop a marketing plan for original programmed application to include; target audience, current competition, delivery options, product pricing, logo design and strategy to spend budgeted funds
3. Communication and Collaboration
   A. Form mobile application development groups to achieve directive of completing working Android applications
   B. Assign tasks to members of development group to achieve directive of creating a mobile application
   C. Use the engineering design cycle within a development team to achieve directive of creating a working mobile application
   D. Project management; students will have opportunity to lead a development team, assign tasks, evaluate progress, facilitate communication among team members and ensure that project is completed within time deadline
   E. Conduct in-class presentations including demonstration of application

4. Using Digital Research Tools
   A. Use appropriate internet websites to gather and analyze research on a variety of subjects including; mobile application development, marketing statistics, color and design theory, post-secondary education options and careers in mobile application development & other STEM related industries
   B. Use appropriate wiki’s and blogs to engage other (distance) users of Android technology and/or Java for research, ideas and help

5. Engineering, Physics & Math
   A. Learn how the process used in designing and developing software can be applied to other design and development projects like bridges, buildings and machines
   B. Learn how basic physics concepts like gravity, acceleration, velocity, speed, trajectory, Newton’s Laws of Motion, force & elasticity are used in mobile application development
   C. Use required mathematical techniques to perform physics calculations in determining how physics is used in mobile application development as compared to the real world
   D. Use knowledge of math & physics to evaluate behavior within applications in the “virtual world” as compared to the “real world”

6. Further Career, STEM & Post-secondary Education Options
   A. Research how technical & communication skills used in mobile application design translate to other technology industries and businesses
   B. Research required post-secondary diplomas, certificates & degrees needed to gain employment in game development and other technology based industries
   C. Research career trends, wage data and employment opportunities in mobile application development and technology based industries

Compare to ISTE – NETS for Students

1. Creativity & Innovation
   Students demonstrate creative thinking, construct knowledge, and develop innovative products and processes using technology. Students:
   A. Apply existing knowledge to generate new ideas, products, or processes.
   B. Create original works as a means of personal or group expression.
   C. Use models and simulations to explore complex systems and issues.
   D. Identify trends and forecast possibilities.
2. Communication and Collaboration
Students use digital media and environments to communicate and work collaboratively, including at a distance, to support individual learning and contribute to the learning of others. Students:

A. Interact, collaborate, and publish with peers, experts, or others employing a variety of digital environments and media.
B. Communicate information and ideas effectively to multiple audiences using a variety of media and formats.
C. Develop cultural understanding and global awareness by engaging with learners of other cultures.
D. Contribute to project teams to produce original works or solve problems.

3. Research and Information Fluency
Students apply digital tools to gather, evaluate, and use information. Students:

A. Plan strategies to guide inquiry.
B. Locate, organize, analyze, evaluate, synthesize, and ethically use information from a variety of sources and media.
C. Evaluate and select information sources and digital tools based on the appropriateness to specific tasks.
D. Process data and report results.

4. Critical Thinking, Problem Solving, and Decision Making
Students use critical thinking skills to plan and conduct research, manage projects, solve problems, and make informed decisions using appropriate digital tools and resources. Students:

A. Identify and define authentic problems and significant questions for investigation.
B. Plan and manage activities to develop a solution or complete a project.
C. Collect and analyze data to identify solutions and/or make informed decisions.
D. Use multiple processes and diverse perspectives to explore alternative solutions.

5. Digital Citizenship
Students understand human, cultural, and societal issues related to technology and practice legal and ethical behavior. Students:

A. Advocate and practice safe, legal, and responsible use of information and technology.
B. Exhibit a positive attitude toward using technology that supports collaboration, learning, and productivity.
C. Demonstrate personal responsibility for lifelong learning.
D. Exhibit leadership for digital citizenship.

6. Technology Operations and Concepts
Students demonstrate a sound understanding of technology concepts, systems, and operations. Students:

A. Understand and use technology systems.
B. Select and use applications effectively and productively.
C. Troubleshoot systems and applications.
D. Transfer current knowledge to learning of new technologies.
Creativity and Innovation

*Think Creatively*

- Use a wide range of idea creation techniques (such as brainstorming)
- Create new and worthwhile ideas (both incremental and radical concepts)
- Elaborate, refine, analyze and evaluate their own ideas in order to improve and maximize creative efforts

*Work Creatively with Others*

- Develop, implement and communicate new ideas to others effectively
- Be open and responsive to new and diverse perspectives; incorporate group input and feedback into the work
- Demonstrate originality and inventiveness in work and understand the real world limits to adopting new ideas
- View failure as an opportunity to learn; understand that creativity and innovation is a long-term, cyclical process of small successes and frequent mistakes

*Implement Innovations*

- Act on creative ideas to make a tangible and useful contribution to the field in which the innovation will occur

Critical Thinking and Problem Solving

*Reason Effectively*

- Use various types of reasoning (inductive, deductive, etc.) as appropriate to the situation

*Use Systems Thinking*

- Analyze how parts of a whole interact with each other to produce overall outcomes in complex systems

*Make Judgments and Decisions*

- Effectively analyze and evaluate evidence, arguments, claims and beliefs
- Analyze and evaluate major alternative points of view
- Synthesize and make connections between information and arguments
- Interpret information and draw conclusions based on the best analysis
- Reflect critically on learning experiences and processes

*Solve Problems*

- Solve different kinds of non-familiar problems in both conventional and innovative ways
- Identify and ask significant questions that clarify various points of view and lead to better solutions
Communication and Collaboration

*Communicate Clearly*

- Articulate thoughts and ideas effectively using oral, written and nonverbal communication skills in a variety of forms and contexts
- Listen effectively to decipher meaning, including knowledge, values, attitudes and intentions
- Use communication for a range of purposes (e.g. to inform, instruct, motivate and persuade)
- Utilize multiple media and technologies, and know how to judge their effectiveness a priori as well as assess their impact
- Communicate effectively in diverse environments (including multi-lingual)

*Collaborate with Others*

- Demonstrate ability to work effectively and respectfully with diverse teams
- Exercise flexibility and willingness to be helpful in making necessary compromises to accomplish a common goal
- Assume shared responsibility for collaborative work, and value the individual contributions made by each team member
